

E1 EngineIce

NEW

NOTHING. COOLS. BETTER. THAN ENGINE ICE - ICE WATER RACING COOLANT.

Improve your coolant's ability to wet heat transfer surfaces by providing significant temperature reduction vs. traditional coolants promoting enhanced horsepower and engine life.

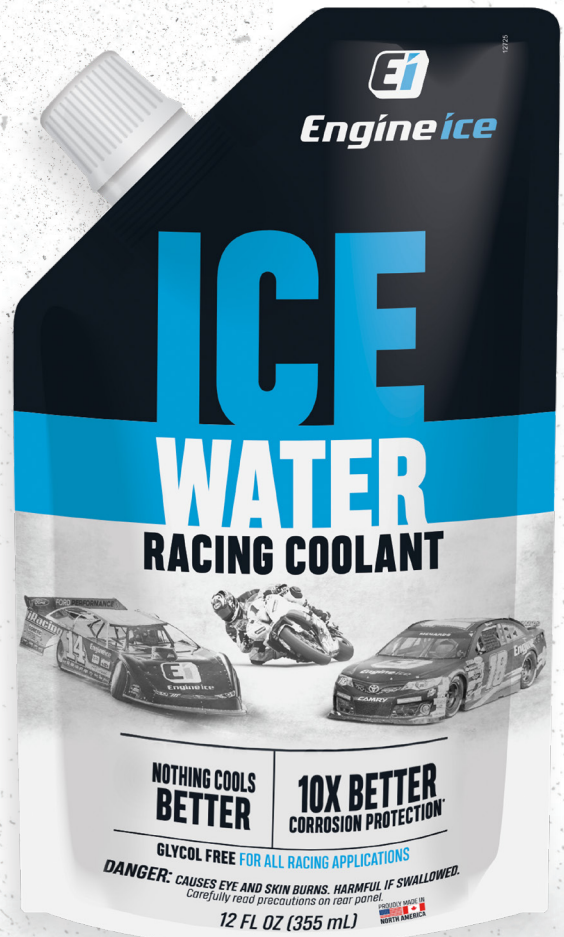

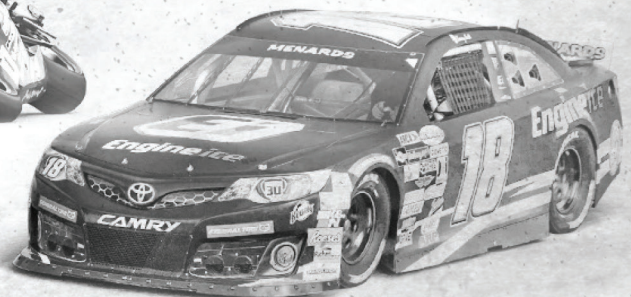

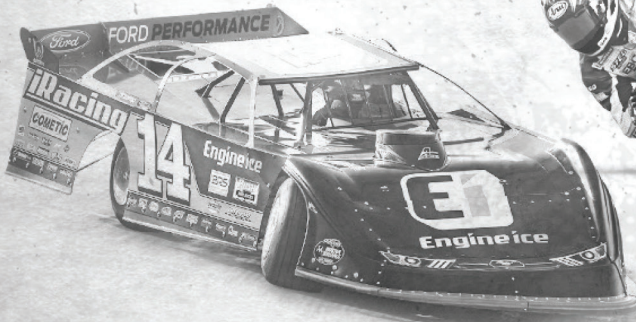

Ice Water has 10X better corrosion protection than the competition using third party lab data

* Aluminum components per ASTM D1384 testing

ENGINE ICE - ICE WATER provides superior heat transfer over water and over 10x better corrosion protection for key aluminum components vs. Water Wetter. Protect all of your parts, including cast iron, brass, steel, and rubber. Just add one 12oz pouch to 3 to 5 gallons of water for optimal racing performance.

- > Superior heat transfer over antifreeze
- > Significantly lowers engine temperatures and improved horsepower vs. traditional antifreeze
- > Superior corrosion and oxidation protection vs. competitive products
- > Superior protection of silicone seals and hoses vs. competitive products
- > Meets ASTM D3306 corrosion requirements
- > Glycol free for all racing applications
